

Rules

- Only one laptop is allowed per team to access the maze.
- You may record your progress, paths, and answers on paper, Notepad, or any preferred medium. We are not responsible for any lost progress.
- Read each question thoroughly before submitting your answer.
- Raise your hand once you find the treasure our team will verify your result.
- The game will conclude when the first two teams successfully unlock the treasure.
- Setup a header with the `team_name` field. Any systems without a team name will not be allowed to participate. Instructions for setting up team name is given below.

Before Game Instructions

- Make sure you are logged in to the Postman Desktop Client.
- Set up a **pre-request script** in **postman collections** which will set the `team_name` header with the proper team name. Here is the code for it.

```
pm.request.headers.add({key: 'team_name', value: '<Your Team Name>' })
```

Make sure that it is `team_name` and not `Team_name` or any variation like that. All the letters are small.

Game Instructions

- All the paths / endpoints should be in small letters only. No capitals anywhere.
- If there are options like (a), (b), (c), (d) with some values, the next path will be the correct option and not the value.
Ex: Endpoint is `/start`, and the correct answer for that question is (a) Govinda, then the next path is `/start/a`.
- When ever you find yourself having to deal with words with spaces between them, replace the spaces with hyphens (-).
Eg: Dr Sunil Kumar PV ⇒ `dr-sunil-kumar-pv`
- When using POST request, the data should be “raw data” with a JSON structure.
- Wrong answers have a penalty.
